Ed:Guy M Hurst, 16, Westminster Close, Kempshott Rise, Basingstoke,
Hants, RG22 4PP, England. Telephone:(0256)471074.Int:+44256471074

Telex:265871(MDNREF G) Quote"72:MAG60138 ATT G.HURST" in FIRST line.

AY LYRAE

John Isles, Cyprus e-mails that this UGSU type variable located at
RA 18h42m43s DEC +37 57.2' (1950)

is undergoing a super-maximum as the following visual estimates
indicate:

Oct 5.69, 112.9; 7.72, 13.1; 9.70, 12.5.

V503 CYGNI

AAVSO Circular 214 received today contains a chart for this UG star
located at:

RA 20h25m33s DEC +43 31.8' (1950)

The GCVS has a range of 13.4-17.0p.

However the chart footnote mentions that identification is
uncertain and gives two possible positions. Copies of the chart can
be supplied on e-mail request and we would like e-mail advice if an
object is seen at either position so that we can arrange
photography to resolve the problem and prepare a TA chart.

3C 446

Further to the note on E-206, the negatives by Brian Manning have
now arrived and the nebulous nature of the image seems definite
unless this is due to some film fault. Photographs of the quasar
are urgently required to investigate this very important
development. The position is:

RA 22h23m11s DEC -05 12'18" (1950)
