Q1989/36

Photographs by David Greenwood and Denis Buczynski show no new
object to account for the Japanese report (cf E301).

Q1989/37

Luigi Rossi, Italy (MAG37184) reports that a star plotted on
drawings of NGC 2903 (RA 09h29.3m DEC +21 44', 1950) on 1989 Mar
23-25 is absent from both the TA (c) chart and the photo by
J.Salmi in 'Check a Supernova'. He estimates it to be of mag 14 and
located 75"N and 105"E between TA comparisons N and M. David
Greenwood reports that he found no new object on a patrol of this
galaxy made on 1989 Apr 7 with a 4m exposure at 23.25UT reaching
mag 15. Does anyone have results near to March 23-25?

Guy M Hurst
